Python Module Index **159**

Index **161**

Intrepid Control Systems, Inc. open source Python module for interfacing to Intrepid hardware. Basic knowledge of using and installing Python modules is assumed. Please see <https://docs.python.org/3/installing/index.html> for documentation on how to install Python modules.

This module is essentially just a wrapper around icsneo40.dll. For more documentation please visit neoVI DLL Documentation under <https://intrepides.com/support/support-resources/>

CHAPTER 1

Whats New?

-Updated icsnVC40.h to v905.10 -Fixed a bunch of issues with setting structures. Script was essentially completely re-written with unit tests now.

CHAPTER 2

v903+ Compatibility Changes

2.1 ISO 15765-2

old naming conventions have been updated to reflect closer to the actual codebase.

```
# Old:  
tx_msg = ics.CmISO157652TxMessage()  
rx_msg = ics.CmISO157652RxMessage()  
  
# New:  
tx_msg = ics.st_cm_iso157652_tx_message.st_cm_iso157652_tx_message()  
rx_msg = ics.st_cm_iso157652_rx_message.st_cm_iso157652_rx_message()
```

ics.st_cm_iso157652_tx_message.st_cm_iso157652_tx_message() data structure is now a ctypes.c_ubyte array instead of a python list.

```
# Old:  
msg.data = [x for x in range(number_of_bytes)]  
  
# New:  
my_data = [x for x in range(number_of_bytes)]  
msg.data = (ctypes.c_ubyte*len(msg.data))(*my_data)  
  
>>> msg.data  
<ics.structures.st_cm_iso157652_tx_message.c_ubyte_Array_4096 object at  
0x0000023E534BE940>
```

2.2 Settings

v903 and up have converted over to a new auto generation of `icsnVC40.h`. This enables faster support for newer Intrepid devices and less error prone. With this switch we have moved to using `ics.s_device_settings`.

```
# Old behavior:  
device = ics.open_device()  
settings = ics.get_device_settings(device)  
# settings is a Vcan3Settings type  
settings.can1.Baudrate = 1  
ics.set_device_settings(device, settings)  
  
# New behavior  
device = ics.open_device()  
settings = ics.get_device_settings(device)  
# settings is a s_device_settings type  
settings.vcan3.can1.Baudrate = 1  
ics.set_device_settings(device, settings)
```

Setting support for the following devices:

- red: s_red_settings
- fire: s_fire_settings
- firevnet: s_fire_vnet_settings
- cyan: s_cyan_settings (FIRE2)
- vcan3: svcn3_settings
- vcan4: svcn4_settings
- ecu: secu_settings
- ievb: sievb_settings
- pendant: s_pendant_settings
- radgalaxy: srad_galaxy_settings
- radstar2: srad_star2_settings
- neoobd2_sim: sobd2_sim_settings

- radsupermoon: srad_super_moon_settings
- radmoon2: srad_moon2_settings
- pluto: srad_pluto_settings
- plutoswitch: s_pluto_switch_settings_s

- radgigastar: srad_gigastar_settings
- jupiter: srad_jupiter_settings
- fire3: s_fire3_settings
- radmoon_duo: s_rad_moon_duo_settings

2.3 PyInstaller

Due to the added complexity underneath when building PyInstaller `hidden_imports.py` should be used now in your spec script:

```
# -*- mode: python ; coding: utf-8 -*-

import ics

block_cipher = None

a = Analysis(['test.py'],
             pathex=['.'],
             binaries=[],
             datas=[],
             hiddenimports=ics.hidden_imports,
             hookspath=[],
             runtime_hooks=[],
             excludes=[],
             win_no_prefer_redirects=False,
             win_private_assemblies=False,
             cipher=block_cipher,
             noarchive=False)
pyz = PYZ(a.pure, a.zipped_data,
           cipher=block_cipher)
exe = EXE(pyz,
          a.scripts,
          [],
          exclude_binaries=True,
          name='test',
          debug=False,
          bootloader_ignore_signals=False,
          strip=False,
          upx=True,
          console=True )
coll = COLLECT(exe,
                a.binaries,
                a.zipfiles,
                a.datas,
                strip=False,
                upx=True,
                upx_exclude=[],
                name='test')
```

CHAPTER 3

Versioning Information

Minor differences can occur between different icsnVC40.h versions. These differences are usually just structures and constant differences. Below is a list of how the python_ics version correlates to the icsnVC40.h version:

3.1 v903

Starting with 903, python_ics module will now match official upstream version releases.

```
pip install 'python_ics>=5.0,<904.0' --force-reinstall
```

Note: Refer to platform specific installation if not on Windows

3.2 Older Versions:

- **v802** pip install 'python_ics>=2.0,<3.0' --force-reinstall

Note: Refer to platform specific installation if not on Windows

- **v803** pip install 'python_ics>=3.0,<4.0' --force-reinstall

Note: Refer to platform specific installation if not on Windows

- **v900** pip install 'python_ics>=4.0,<5.0' --force-reinstall

Note: Refer to platform specific installation if not on Windows

CHAPTER 4

Installation on Windows

PyPi provides binary packages for Windows. You can simply install the `python_ics` module by running the following command:

```
pip install python_ics
```

Note: `pip.exe` is usually located under the `Scripts` directory under the Python installation directory.

4.1 Building from source

Building from source on windows is not usually need so it won't really be covered here in detail. As a starting point you'll need to match the compiler version used to build the official Python binaries (MSVC). If the build environment is setup correctly, you should be able to run `python setup.py build` like usual.

4.2 Intrepid icsneo40 Library

`python_ics` module looks for `icsneo40.dll` in the normal windows DLL search paths. The module will throw an exception if its not found.

CHAPTER 5

Installation on Linux

python_ics does not provide binaries for linux distributions so we will have to compile from source. This can be easily achieved by utilizing Python's PIP. First we need to make sure we have some base packages installed.

libicsneo is a newer library and has wider support for Intrepid Products under linux (<https://github.com/intrepidcs/libicsneo>). libicsneo has a legacy library (libicsneolegacy.so) that can be loaded by utilizing ics.override_library_name("libicsneolegacy.so").

5.1 Fedora Dependencies (FC28)

```
sudo dnf install redhat-rpm-config gcc g++ python3-devel
```

5.2 Debian/Ubuntu Dependencies

```
sudo apt install build-essential python-dev
```

5.3 Others (Required dependencies)

- GCC
- G++
- Python Development packages (We Need to link to Python.h)

5.4 Installation

After dependencies are installed we can run the following pip command:

```
pip install python_ics
```

Note: A lot of distributions have Python 2 and 3 installed side by side. As of this writing without a version suffix the commands still default to version 2 of the Python binaries. In order to utilize the Python 3 binaries you must append a 3 after the binary names (python3 and pip3 instead of just python and pip).

5.5 Intrepid libicsneoapi.so Library

Please see <https://github.com/intrepidcs/icsneoapi> for more details.

CHAPTER 6

Getting Started

Please see https://github.com/intrepidcs/python_ics/tree/master/examples for simple examples on how to use this module. Most function documentation has a simple example on how its intended to be used. Every function was designed to be as close as possible to it's C counterpart unless it was deemed to make the function more pythonic in nature.

For those experienced with the C API `ics.open_device (icsneoOpenNeoDevice())` behavior has been changed the most (no parameters makes it auto utilize `ics.find_devices (icsneoFindNeoDevices())` and open the first device). Also since python is a object oriented language the module utilizes this and auto cleans up device handles when going out of scope so there is usually no need to call `ics.close_device()`.

CHAPTER 7

Examples

Examples can be found at https://github.com/intrepidcs/python_ics/tree/master/examples

For extra information on data structures and underlying functionality, please visit neoVI DLL Documentation under <https://intrepidcs.com/support/support-resources/>

7.1 Opening a device

The `open_device_example.py` example shows how to successfully open and close an Intrepid device.

7.2 Transmitting and Receiving a CAN message

The following examples show how to interact with CAN messages on an Intrepid device.

- `transmit_can_example.py`: Basic example showing how to transmit and receive standard CAN frame
- `transmit_can_xtd_example.py`: Builds off of the CAN example and adds extended Arbitration ID attributes
- `canfd_transmit_example.py`: Bare minimum example on how to transmit over CANFD.

7.3 ISO 15765-2 Example

The `iso15765_example.py` example shows how to setup basic ISO 15765-2 receive filters and transmitting an ISO 15765-2 message.

After opening an Intrepid device `ics.iso15765_enable_networks` should be called to enable ISO 15765-2.

Receive filtering can be established by passing a custom `ics.CmISO157652RxMessage()` to `ics.iso15765_receive_message()`.

Similarly transmitting an ISO 15765-2 frame can be accomplished by passing a custom `ics.CmISO157652TxMessage()` to `ics.iso15765_transmit_message()`.

7.4 Missing an example?

Need an example on something that isn't covered here? Please submit an issue on [github](#) or feel free to send over a Pull Request of your own.

CHAPTER 8

Module Documentation

Python C Code module for interfacing to the icsneo40 dynamic library. Code tries to respect PEP 8 (<http://python.org/dev/peps/pep-0008>). Function naming convention does not follow the tradition c style icsneo40 naming convention as pyics module name acts as the namespace (icsneo portion of the function) and function names are suppose to be lowercase with underscores instead of mixedCase like icsneo API.

C API can be mimiced almost identically by doing the following:

```
>>> import ics as icsneo
>>> devices = icsneo.FindNeoDevices()
>>> for device in devices:
...     print(device.Name, device.SerialNumber)
...
neoVI FIRE 59886
```

Recommended Python way by doing the following:

```
>>> import ics
>>> devices = ics.find_devices()
>>> for device in devices:
...     print(device.Name, device.SerialNumber)
...
neoVI FIRE 59886
```

It should be noted that `ics.ics.NeoDevice` is used a little bit differently than the C API. `ics.ics.NeoDevice` contains two extra members:

`ics.ics.NeoDevice.AutoHandleClose` and `ics.ics.NeoDevice._Handle`

The handle normally returned from `icsneoOpenNeoDevice()` is stored inside `_Handle` and setting `AutoHandleClose` to True (Default) will automatically close the handle when the `ics.ics.NeoDevice` goes out of scope.

Installation:

`pip install python_ics`
